Ensuring Competency in Process Safety

Good Process Safety in any organization requires specific **knowledge**, **experience** and **skills**. Sounds sensible. These building blocks of Process Safety Competency lie, of course, with your organization's staff. But wait a moment. How do I know that I have the necessary levels of competency in **my** organization? Now it's getting more difficult..... **Continue reading**

Organizational Process Safety Competency Assessment can provide the answer to the question posed above. Our training courses can help fill the gaps identified.

Cases in the News: Avoiding the Big One

In late May last year, in South Sioux City, engineers were pondering the best way to demolish a grain elevator. The reason; a series of explosions in the 200-foot elevator tower had rendered the structure unsafe; and families from a dozen homes nearby, around fifty people, were waiting to hear when they would be allowed back home. Of course, their plight belies the grief of workers injured and their families, in one case fatally, who were caught in the explosion.

Stonehouse Process Safety commentary

We do not comment on this serious event. We do ask why such events happen with worrying regularity and why, when much is known about safe elevator and silo explosion design, we continue to witness these shocking events time and time again….**Continue reading**
